

How to Gain Six Core Sourcing Proficiencies & Pass the CPSP Exam

By the [Sourcing Certifications](#) Team

We award the Certified People Sourcing Professional (CPSP) credential to those who demonstrate proficiency across six core skill groups by passing the [CPSP Exam](#). The exam is *not* easy, but test preparation is straightforward using the following course guide.

In the following pages, we will explain the six core proficiencies and identify which of our Training Library courses provides the best foundations in each.

Exploratory
Research

Google
Search

Using
LinkedIn

Cross-
Referencing

X-Ray
Search

Social
Sourcing

If you are just starting out, or want an overview of these sourcing methods for efficiency, this class will help: [What Every Recruiter Needs to Know About Sourcing](#).

Alternatively to taking individual classes for each skill, you could attend our [Talent Sourcing Bootcamp](#), which qualifies you for a \$100 discount on the exam fee (normally \$499).

1. Exploratory Research

Exploratory research helps answer the questions that arise after you have received a job order and are exploring the market before building your list of candidates. These skills include identifying target companies to source from, scoping the market in a new location, learning about relevant professional credentials, or finding top schools for a given field of study.

Equipped with this information, you can construct better searches when the time comes to identify candidates. Without doing this research upfront, you may encounter false positives and negatives when searching without realizing it.

As modern search engines are optimized to answer "questions" from users, straightforward, plain-language searches are the best strategy for performing exploratory research. We expect Sourcers to be proficient at crafting simple searches to find the information they need quickly.

It is also essential to analyze the search results, investigating and choosing the correct one when more than one plausible "answer" is provided.

[Competitive Intelligence for Recruiters](#) is the class we recommend to focus on this proficiency.

2. Google Search

Google is the #1 search engine globally, and mastering its advanced capabilities is essential for anyone who searches for information online. While other search engines, such as Bing, Yandex, or Baidu, can be helpful, we believe Google should be the default Sourcing search engine. In practice, Google is "enough" for most searches.

This category covers how Google works, how to use Boolean logic in searches, how Google search operators work, and how to search using various specialty search products (including patent, publication, and image searches). However, we have separated X-Ray searches (that is, searches using the *site:* operator) into a separate category because of their importance.

[Boolean Strings Basics & Beyond](#) is the best course for enhancing your Google search skills.

3. X-Ray Search

Proficiency in using Google's *site:* operator is so vital in Sourcing that we have included X-Raying as a separate category.

Social Networks, contact databases, associations, and other sites have user profiles and public pages, which you can find by X-Raying. It is crucial to understand which information is on public profiles and how precisely we can X-Ray for any professional field.

Figuring out how to X-Ray a site to find profiles only and search for professional fields such as company, title, and location within user profiles (as well as possible) are essential Sourcing skills. X-Raying can compensate for weak or non-existent search dialog on a site; it can provide complementary results if a dialog exists.

An X-Ray template for a site may use the operators *intitle:* and *inurl:*. It may also use a common phrase for all profiles on the site, like "*member since.*" Appending professional keywords to an X-Ray template finds user profiles with target qualities defined by the keywords.

There is no better class than [Advanced X-Ray Searching](#) to help you master this vital skill.

4. Cross-Referencing Information

Sourcers routinely seek further background on professionals when they have insufficient data. For instance, they do not know which degree someone got, what job responsibilities someone had at his last position, and look this information up. Another common task is finding contact information based on a professional's LinkedIn profile.

Additional knowledge is helpful for pre-assessing a potential candidate and warming up the initial interaction with her.

Sourcers need to be able to find the missing data (e.g., an email address, location, or employer) based on information available from a social profile, phone number, or even a picture.

We have several courses that cover this proficiency, including [Find Anyone's Contact Info](#) and [How to Find Hidden LinkedIn Profiles](#) (which will also be helpful for the next proficiency).

5. LinkedIn.com

No Recruiter or Sourcer can avoid the largest global professional database with its messaging capabilities and members' self-reported information. For almost any job opening, you will find matching candidates on LinkedIn. While there are fake and outdated LinkedIn profiles, the general reliability of profile data is high.

Unfortunately, LinkedIn's UI is often unintuitive, and not all profile information is searchable. To search well, you need to understand how each filter works (and it is seldom the way you think, especially in LinkedIn Recruiter!) and know how to X-Ray LinkedIn.

Good choices for building this proficiency include [LinkedIn Solved](#) and [LinkedIn Recruiter Mastery](#).

6. Social Sourcing

LinkedIn is the go-to source for most Sourcers and Recruiters. But LinkedIn has only about 15% of professionals worldwide. Sourcers must discover, explore, and extract data from online resources, but we highlight social sites for special attention. Social sites provide rich background details about individual professionals and communities and mechanisms for interacting with their members.

Six Core Sourcing Proficiencies to Earn Your CPSP

Updated: March 2023

The process of discovering and exploring new niche social sites for a given Sourcing project relies on skills from the Exploratory Research and X-Ray Searches categories. However, large social sites (e.g., Facebook, Instagram, Twitter, and Reddit) merit understanding regardless of your professional niche.

[All Source Recruiting](#) is the class we designed specifically to address this proficiency.
